SKILLS

Languages/Frameworks: React.js, TypeScript, JavaScript, Redux, HTML, CSS, Tailwind CSS, Vite, WebSockets

Testing Frameworks: Jest, React Testing Library, Cucumber, Enzyme

Technologies: Git, Node.js, Jira, Figma, Openfin, AWS, Kubernetes, REST API, RxJS, AG Grid, AMPs

EXPERIENCE

Trumid

May 2025 - Present

Software Engineer II

Remote

- Contributing to the development of Trumid's Portfolio Trading application, a React-based platform used for portfolio trading, supporting complex trading workflows and real-time market interactions.
- Improving UI performance and responsiveness by optimizing state subscriptions and render paths in data-heavy views, ensuring stable behavior under frequent market and user-driven updates.
- Building and enhancing interactive trading interfaces and data-driven components, focusing on usability, UI/UX, and clear presentation of portfolio and bond information.
- Expanding and maintaining automated test coverage across unit, integration, and e2e testing.
- Collaborating cross-functionally with product, backend, and QA to refine trading workflows and ensure frontend behavior aligned with business and market requirements.
- Contributing to internal AI developer tooling by enhancing knowledge files and usage guidelines, improving the quality, consistency, and usefulness of AI tooling.

JPMorgan Chase & Co.

Jul 2020 - May 2025

Software Engineer II

Houston, TX

- Owned the development of real-time React trading applications used daily by hundreds of internal traders, delivering low-latency market data visualization and trade execution capabilities across exchanges.
- Architected a real-time cross-app communication framework using RxJS and OpenFin, enabling seamless data synchronization between desktop trading applications and reducing manual workflow overhead.
- Improved frontend performance for high-frequency market data by leveraging AG Grid virtualization, intelligent caching, and async loading, ensuring consistent UI responsiveness under heavy data loads.
- Drove the retirement of legacy trading systems, leading frontend migrations to a modern React architecture that reduced operational costs and improved system reliability.
- Defined frontend testing and quality standards across applications using TypeScript, Jest, and React Testing Library, improving long-term maintainability.
- Helped scale JPMC's internal design system by contributing shared components and patterns adopted across multiple trading teams.

American Express

Jun 2019 - Aug 2019

Software Engineer Intern

Phoenix, AZ

- Built a full-stack React and Node.js application to monitor credit card processing services, displaying real-time warnings and failures to support faster issue triage.
 - Developed RESTful health-check endpoints used during stress tests and backend service monitoring.
 - Implemented frontend dashboards to visualize service status and alerts, improving engineers' ability to detect and investigate system issues.
-

EDUCATION

University of Houston

Aug 2016 - May 2020

B.S Computer Science

GPA: 3.72

CERTIFICATES

AWS Certified Cloud Practitioner

05/07/2024 - 05/07/2027

PROJECTS

- 2nd Place Hackathon 2019 - American Express Intern Hackathon, Phoenix, AZ
- 3rd Place CodeRED Hackathon 2018 - University of Houston, TX
- Built a Fullstack eCommerce platform using React/React Native, Node.js/Express.js, Oracle DB, designed a custom checkout that integrated paypal via react-paypal-js
- Built my personal [website](#) and components from scratch with React.js, Vite, Tailwind CSS
